

The BioCleaner logo is rendered in a stylized, italicized blue font with a white outline. The background of the entire advertisement is a composite image: the left side shows a serene lake with trees reflected in the water, while the right side features a dynamic splash of water against a light blue sky.

**NO SLUDGE, NO ODOR
GREEN PATENT A**

Environmentally Effective.
Economically Efficient.

BioCleaner

The most convenient wastewater treatment system in the world

BioCleaner

The most convenient wastewater treatment system in the world

The BioCleaner system is a revolutionary, patented US technology that harnesses the power of nature to treat all types of wastewater in sewage treatment plants (STP) or wastewater treatment plants (WWTP), such as in residential, commercial, industrial, municipal sectors.

The Bio Cleaner is a complete wastewater treatment system that floats in a tank or lagoon;

When the aeration is turned on, it will constantly produce good microbes that will spread throughout the tank and digest the wastewater. The high production of good microbes is due to the US patented media or housing the microbes are inoculated in. Each BioCleaner can treat at least 50kg of Biological Oxygen Demand (BOD) total each day. The BioCleaner can also be used to treat natural and man-made lakes and rivers.

BioCleaner is perfect for:

Natural Waterways

Rivers, Lakes and Creeks

Industrial

Factories, Industrial Parks and Economic Zones

Agricultural

Piggeries, Chicken and Cow Farms

Commercial and Municipal

Malls, Condominiums, Gated Communities, and Hospitals

The BioCleaner differs

- ✓ **Most Convenient**
- ✓ **Lowest OPEX**
- ✓ **No sludge**
